Natural Resource Projects & Practices ➤ Water Quality Implementation

The White Bridge project is located along Tom Beall Creek and is the first barrier upstream of the stream's confluence with Lapwai Creek. This barrier was identified in 2004 as a full passage barrier due to the outlet drop exceeding the passage criteria as well as steepness of slope (Taylor, 2004). Planning and implementation efforts have been underway since 2013. The 17.36 square mile drainage is a tributary to Lapwai Creek. The objectives of treating this subwatershed within the Lapwai Creek system is to reduce sediment delivery to the stream, increase shading, reconnect the channel to its floodplain, and restore fish passage.

No Key Photo provided

Key Accomplishments

Accomplishments to be provided upon completion of Project

Project Themes

- Habitat and Species
- Healthy Watersheds
- Water

Location

Expenditures

No expenditures provided

Photos

No additional photos provided

Tracker tells stories at a broad-brush level. Individual project performance measures and expenditures should not be relied upon for complete and total accuracy and should be confirmed with a project's lead implementer. Project locations subject to confidentiality provisions under state and federal law specify the location of a local conservation district or USDA service center office.
